8 Ranking **5**

1 The Mission

Your Mission

Analyze the HR data, find **why employees leave**, build a **dashboard** that lets management explore it, and write a **PDF report** that tells them what to do about it.

Challenge Type

This is a **data analysis** challenge. No machine learning model is required or scored. You are judged on the quality of your **understanding** and your **decisions**, not on a prediction metric.

2 What You Receive

- One HR dataset (Excel / CSV), the same for every team.
- A data dictionary explaining each column.

Data Quality Warning

Real data is never clean. Expect **missing values**, **duplicates**, **inconsistent labels**, and **impossible values**. Handling them well is part of the score.

3 What You Must Submit

File	Format	Naming Convention
Dashboard	Power BI (`.pbix`), Excel (`.xlsx`), or Tableau (`.twbx`)	`TeamName_Reality.<ext>`
Report	PDF	`TeamName_Reality.pdf`

Mandatory

Both files are required. A missing file means the mission is **not complete**.

4 Rules

- **Tools:** use a visual BI tool (Power BI, Excel, Tableau). Python/SQL may be used for cleaning, but the final dashboard must be built in your BI tool.
- **AI:** allowed **only as a guide or for research** (explaining a concept, looking up a method). Do **not** connect any AI or MCP to Power BI or to the tool you build with, and do not let an AI build your dashboard or write your report.
- **Declaration:** you must declare in your report how you used AI and tools (see Section 5, last item).

★ **Honesty:** do not hide problems, and do not claim more than the data supports.

5 The PDF Report — Required Structure

Length Limit

10 pages maximum, appendix excluded. Sections must appear **in this order**.

5.1 Cover

Team name, members with their department, BI tool used, names of the submitted files.

5.2 1. Executive Summary

The most important section. A manager who reads only this must understand your whole work.

★ **Final answer:** the **top 3 reasons** employees leave, **ranked**, each backed by a number.

★ Your **number-one recommendation** and its expected financial impact.

★ One sentence on what you could **not** conclude.

Locked Answer

This "final answer" is **locked at submission**. On Welcome Day, it will be compared to **the reality** hidden in the data.

5.3 2. Business Question and Scope

Restate the problem in your own words. State your assumptions and define your indicators (e.g. *attrition rate = employees who left ÷ total employees*).

5.4 3. Data and Cleaning Log

★ Number of rows **before** and **after** cleaning.

★ A table with, for each problem found: **what it is**, **how many cases**, **what you did**, **why**.

★ Must cover: **duplicates**, **missing values**, **outliers / impossible values**, **inconsistent labels**.

Problem	Cases Found	Action Taken	Justification
Duplicates	*n*	…	…
Missing values	*n*	…	…
Outliers	*n*	…	…
Inconsistent labels	*n*	…	…

5.5 4. Dashboard Overview

Screenshots of your dashboard and a short **reading guide**: what each view shows, what the filters do, and which question each view answers.

5.6 5. Findings

Between **3 and 5 findings**. Each finding follows this pattern:

1. **Claim:** one clear sentence.
2. **Evidence:** a chart. Its **title must be the conclusion**, not a description.
   - → Write *"Attrition peaks in the first 2 years"*, not *"Attrition by tenure"*.
   - → Show the sample size n and label the axes.
3. **Why it matters:** the business meaning.
4. **Confidence:** High / Medium / Low, with a reason.

Required Finding

At least one finding must describe **who the employee who leaves looks like** (profile).

5.7 6. Recommendations

Every finding must lead to at least one recommendation. Use the cost information in the data to justify numbers.

Action	Target Group	Est. Cost	Expected Benefit	Priority	Risk
...	...	...	...	...	...
...	...	...	...	...	...
...	...	...	...	...	...

5.8 7. Limitations

What the data cannot tell you, where correlation is not causation, and what you would investigate next.

5.9 8. Tools and AI Declaration

- ★ Which tools you used and for what.
- ★ Where and how you used AI (guide/research only).
- ★ A statement that no AI/MCP was connected to your BI tool.
- ★ Signed by the team.

5.10 Appendix *(not counted in the page limit)*

Data dictionary, extra charts, calculation details.

6 Dashboard — Minimum Requirements

- ★ Works without errors when opened; built on your **cleaned** data.
- ★ At least **5 KPIs** clearly visible (e.g. attrition rate, number of leavers, cost of attrition).
- ★ At least **3 interactive filters** (slicers).

- At least one view showing **change over time**, and one comparing **groups**.
- Readable by a non-technical manager: clear titles, consistent colors, no clutter.

7 Mission Complete Checklist

Your team's mission is **complete** only if **all** of the following are verified by a supervisor at submission:

Mission Complete — Verify Before Submission

- [x] PDF follows the required structure, in order, within the page limit.
- [x] Dashboard opens without errors and meets the minimum requirements.
- [x] Cleaning log covers all four problem types.
- [x] At least 3 findings, each with evidence and a linked recommendation.
- [x] Recommendation table is complete (cost and benefit included).
- [x] Tools and AI declaration is signed.
- [x] Both files are named correctly and submitted before the deadline.

8 Ranking

- Teams are evaluated on: data cleaning, depth and correctness of analysis, dashboard quality, recommendations, and report quality.
- At [**TIME**], if a team has finished with **Mission Complete**, it takes **first place**.
- On Welcome Day, **the reality is revealed**: your locked final answer is compared with what is truly in the data.

Good luck.
